

A Read this manual carefully before operating this vehicle.

1 j= j

Introduction

EAU10103

Welcome to the Yamaha world of motorcycling!

As the owner of the T135F, you are benefiting from Yamaha's vast experience and newest technology regarding the design and manufacture of high-quality products, which have earned Yamaha a reputation for dependability.

Please take the time to read this manual thoroughly, so as to enjoy all advantages of your T135F. The Owner's Manual does not only instruct you in how to operate, inspect and maintain your motorcycle, but also in how to safeguard yourself and others from trouble and injury.

In addition, the many tips given in this manual will help keep your motorcycle in the best possible condition. If you have any further questions, do not hesitate to contact your Yamaha dealer.

The Yamaha team wishes you many safe and pleasant rides. So, remember to put safety first!

Yamaha continually seeks advancements in product design and quality. Therefore, while this manual contains the most current product information available at the time of printing, there may be minor discrepancies between your motorcycle and this manual. If there is any question concerning this manual, please consult a Yamaha dealer.

EWA10032

Please read this manual carefully and completely before operating this motorcycle.

EAU10134

Particularly important information is distinguished in this manual by the following notations:

	This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.
	A WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.
NOTICE	A NOTICE indicates special precautions that must be taken to avoid damage to the vehicle or other property.
TIP	A TIP provides key information to make procedures easier or clearer.

*Product and specifications are subject to change without notice.

2

Be a Responsible Owner

As the vehicle's owner, you are responsible for the safe and proper operation of your motorcycle.

Motorcycles are single-track vehicles. Their safe use and operation are dependent upon the use of proper riding techniques as well as the expertise of the operator. Every operator should know the following requirements before riding this motorcycle.

He or she should:

- Obtain thorough instructions from a competent source on all aspects of motorcycle operation.
- Observe the warnings and maintenance requirements in this Owner's Manual.
- Obtain qualified training in safe and proper riding techniques.
- Obtain professional technical service as indicated in this Owner's Manual and/or when made necessary by mechanical conditions.

 Never operate a motorcycle without proper training or instruction.
 Take a training course. Beginners should receive training from a certified instructor. Contact an authorized motorcycle dealer to find out about the training courses nearest you.

Safe Riding

Perform the pre-operation checks each time you use the vehicle to make sure it is in safe operating condition. Failure to inspect or maintain the vehicle properly increases the possibility of an accident or equipment damage. See page 5-1 for a list of pre-operation checks.

- This motorcycle is designed to carry the operator and a passenger.
- The failure of motorists to detect and recognize motorcycles in traffic is the predominating cause of automobile/motorcycle accidents. Many accidents have been caused by an automobile driver who did not see the motorcycle. Making yourself conspicuous ap-

pears to be very effective in reducing the chance of this type of accident.

Therefore:

- Wear a brightly colored jacket.
- Use extra caution when you are approaching and passing through intersections, since intersections are the most likely places for motorcycle accidents to occur.
- Ride where other motorists can see you. Avoid riding in another motorist's blind spot.
- Never maintain a motorcycle without proper knowledge. Contact an authorized motorcycle dealer to inform you on basic motorcycle maintenance. Certain maintenance can only be carried out by certified staff.

- Many accidents involve inexperienced operators. In fact, many operators who have been involved in accidents do not even have a current motorcycle license.
 - Make sure that you are qualified and that you only lend your motorcycle to other qualified operators.
 - Know your skills and limits. Staying within your limits may help you to avoid an accident.
 - We recommend that you practice riding your motorcycle where there is no traffic until you have become thoroughly familiar with the motorcycle and all of its controls.
- Many accidents have been caused by error of the motorcycle operator. A typical error made by the operator is veering wide on a turn due to excessive speed or undercornering (insufficient lean angle for the speed).
 - Always obey the speed limit and never travel faster than warranted by road and traffic conditions.

- Always signal before turning or changing lanes. Make sure that other motorists can see you.
- The posture of the operator and passenger is important for proper control.
 - The operator should keep both hands on the handlebar and both feet on the operator footrests during operation to maintain control of the motorcycle.
 - The passenger should always hold onto the operator, the seat strap or grab bar, if equipped, with both hands and keep both feet on the passenger footrests. Never carry a passenger unless he or she can firmly place both feet on the passenger footrests.
- Never ride under the influence of alcohol or other drugs.
- This motorcycle is designed for on-road use only. It is not suitable for off-road use.

Protective Apparel

The majority of fatalities from motorcycle accidents are the result of head injuries. The use of a safety helmet is the single most critical factor in the prevention or reduction of head injuries.

- Always wear an approved helmet.
- Wear a face shield or goggles. Wind in your unprotected eyes could contribute to an impairment of vision that could delay seeing a hazard.
- The use of a jacket, heavy boots, trousers, gloves, etc., is effective in preventing or reducing abrasions or lacerations.
- Never wear loose-fitting clothes, otherwise they could catch on the control levers, footrests, or wheels and cause injury or an accident.
- Always wear protective clothing that covers your legs, ankles, and feet. The engine or exhaust system become very hot during or after operation and can cause burns.
- A passenger should also observe the above precautions.

Avoid Carbon Monoxide Poisoning

2

All engine exhaust contains carbon monoxide, a deadly gas. Breathing carbon monoxide can cause headaches, dizziness, drowsiness, nausea, confusion, and eventually death. Carbon Monoxide is a colorless. odorless, tasteless das which may be present even if you do not see or smell any engine exhaust. Deadly levels of carbon monoxide can collect rapidly and vou can quickly be overcome and unable to save yourself. Also, deadly levels of carbon monoxide can linger for hours or days in enclosed or poorly ventilated areas. If you experience any symptoms of carbon monoxide poisoning, leave the area immediately, get fresh air, and SEEK MEDICAL TREAT-

- MENT.
 Do not run engine indoors. Even if you try to ventilate engine exhaust with fans or open windows and doors, carbon monoxide can rapidly reach dangerous levels.
 - Do not run engine in poorly ventilated or partially enclosed areas such as barns, garages, or carports.

 Do not run engine outdoors where engine exhaust can be drawn into a building through openings such as windows and doors.

Loading

Adding accessories or cargo to your motorcycle can adversely affect stability and handling if the weight distribution of the motorcycle is changed. To avoid the possibility of an accident, use extreme caution when adding cargo or accessories to your motorcycle. Use extra care when riding a motorcycle that has added cargo or accessories. Here, along with the information about accessories below, are some general guidelines to follow if loading cargo to your motorcycle:

The total weight of the operator, passenger, accessories and cargo must not exceed the maximum load limit. Operation of an overloaded vehicle could cause an accident.

Maximum load: 150 kg (331 lb) When loading within this weight limit, keep the following in mind:

- Cargo and accessory weight should be kept as low and close to the motorcycle as possible. Securely pack your heaviest items as close to the center of the vehicle as possible and make sure to distribute the weight as evenly as possible on both sides of the motorcycle to minimize imbalance or instability.
- Shifting weights can create a sudden imbalance. Make sure that accessories and cargo are securely attached to the motorcycle before riding. Check accessory mounts and cargo restraints frequently.
 - Properly adjust the suspension for your load (suspension-adjustable models only), and check the condition and pressure of your tires.
 - Never attach any large or heavy items to the handlebar, front fork, or front fender. These items, including such cargo as sleeping bags, duffel bags, or

tents, can create unstable handling or a slow steering response.

• This vehicle is not designed to pull a trailer or to be attached to a sidecar.

Genuine Yamaha Accessories

Choosing accessories for your vehicle is an important decision. Genuine Yamaha accessories, which are available only from a Yamaha dealer, have been designed, tested, and approved by Yamaha for use on your vehicle.

Many companies with no connection to Yamaha manufacture parts and accessories or offer other modifications for Yamaha vehicles. Yamaha is not in a position to test the products that these aftermarket companies produce. Therefore, Yamaha can neither endorse nor recommend the use of accessories not sold by Yamaha or modifications not specifically recommended by Yamaha, even if sold and installed by a Yamaha dealer.

Aftermarket Parts, Accessories, and Modifications

While you may find aftermarket products similar in design and guality to genuine Yamaha accessories, recognize that some aftermarket accessories or modifications are not suitable because of potential safety hazards to vou or others. Installing aftermarket products or having other modifications performed to your vehicle that change any of the vehicle's design or operation characteristics can put you and others at greater risk of serious injury or death. You are responsible for injuries related to changes in the vehicle. Keep the following guidelines in mind, as well as those provided under "Loading" when mounting accessories.

 Never install accessories or carry cargo that would impair the performance of your motorcycle. Carefully inspect the accessory before using it to make sure that it does not in any way reduce ground clearance or cornering clearance, limit suspension travel, steering travel or control operation, or obscure lights or reflectors.

- Accessories fitted to the handlebar or the front fork area can create instability due to improper weight distribution or aerodynamic changes. If accessories are added to the handlebar or front fork area, they must be as lightweight as possible and should be kept to a minimum.
- Bulky or large accessories may seriously affect the stability of the motorcycle due to aerodynamic effects. Wind may attempt to lift the motorcycle, or the motorcycle may become unstable in cross winds. These accessories may also cause instability when passing or being passed by large vehicles.
- Certain accessories can displace the operator from his or her normal riding position. This improper position limits the freedom of movement of the

operator and may limit control ability, therefore, such accessories are not recommended.

 Use caution when adding electrical accessories. If electrical accessories exceed the capacity of the motorcycle's electrical system, an electric failure could result, which could cause a dangerous loss of lights or engine power.

Aftermarket Tires and Rims

The tires and rims that came with your motorcycle were designed to match the performance capabilities and to provide the best combination of handling, braking, and comfort. Other tires, rims, sizes, and combinations may not be appropriate. See page 7-17 for tire specifications and for information on servicing and replacing your tires.

Transporting the Motorcycle

Be sure to observe following instructions before transporting the motorcycle in another vehicle.

- Remove all loose items from the motorcycle.
- Check that the fuel cock (if equipped) is in the off position and that there are no fuel leaks.
- Shift the transmission into gear (for models with a manual transmission).
- Secure the motorcycle with tiedowns or suitable straps that are attached to solid parts of the motorcycle, such as the frame or upper front fork triple clamp (and not, for example, to rubber-mounted handlebars or turn signals, or parts that could break). Choose the location for the straps carefully so the straps will not rub against painted surfaces during transport.
- The suspension should be compressed somewhat by the tiedowns, if possible, so that the motorcycle will not bounce excessively during transport.

Further safe-riding points

- Be sure to signal clearly when making turns.
- Braking can be extremely difficult on a wet road. Avoid hard braking, because the motorcycle could slide. Apply the brakes slowly when stopping on a wet surface.
- Slow down as you approach a corner or turn. Once you have completed a turn, accelerate slowly.
- Be careful when passing parked cars. A driver might not see you and open a door in your path.
- Railroad crossings, streetcar rails, iron plates on road construction sites, and manhole covers become extremely slippery when wet. Slow down and cross them with caution. Keep the motorcycle upright, otherwise it could slide out from under you.
- The brake pads or linings could get wet when you wash the motorcycle. After washing the motorcycle, check the brakes before riding.

- Always wear a helmet, gloves, trousers (tapered around the cuff and ankle so they do not flap), and a brightly colored jacket.
- Do not carry too much luggage on the motorcycle. An overloaded motorcycle is unstable. Use a strong cord to secure any luggage to the carrier (if equipped). A loose load will affect the stability of the motorcycle and could divert your attention from the road. (See page 2-3.)

- 6. Main switch/steering lock (page 4-1)

Main switch/steering lock

The main switch/steering lock controls the ignition and lighting systems, and is used to lock the steering, and is used to open the seat also. The various main switch positions are described below.

TIP _____

The main switch is equipped with a keyhole cover. (See page 4-2 for keyhole cover opening and closing procedures.)

ON

All electrical circuits are supplied with power and the vehicle lights are turned on. The engine can be started. The key cannot be removed.

TIP_

- To prevent battery discharge, do not leave the key in the "ON" position without the engine running.
- This model is equipped with a fuel pump. When the vehicle is first turned on, a noise from the fuel pump can be heard, but this is not a malfunction.

OFF

All electrical systems are off. The key can be removed.

EWA10073

EAU45752

WARNING

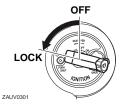

Never turn the key to "OFF" while the vehicle is moving, otherwise the electrical systems will be switched off, which may result in loss of control or an accident.

LOCK

FAL185031

The steering is locked, and all electrical systems are off. The key can be removed.

To lock the steering

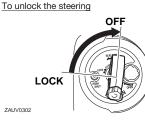

- 1. Turn the handlebars all the way to the left.
- Push the key in from the "OFF" position, and then turn it to "LOCK" while still pushing it.
- 3. Remove the key.

TIP.

If the steering will not lock, try turning the handlebars back to the right slightly.

EAUU1043

ZAUV0302

Push the key in, and then turn it to "OFF" while still pushing it. EWAI 10042

WARNING

- Never turn the key to "OFF" or "LOCK" while the vehicle is moving: otherwise, the electrical systems will be switched off. which may result in loss of control or an accident.
- If the vehicle turns over, and after placing it upright, ensure that there is no fuel leakage. If fuel is leaking, have a Yamaha dealer check the vehicle.

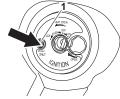

1. Key head 2. Ignition key

To open the keyhole cover

Insert the key head into the keyhole cover receptacle as shown, and then turn the key to the right to open the cover.

To close the keyhole cover

1. "PUSH SHUT" button

Press the "PUSH SHUT" button to close the keyhole cover.

4

Indicator lights and warning lights

- 1. Neutral indicator light " N "
- 2. Engine trouble warning light " 🔁 "
- 3. High beam indicator light "≣O"
- 4. Turn signal indicator light " 🗘 🖒 "
- 5. Coolant temperature warning light " 🗜 "

Turn signal indicator light "↔ ⇔"

This indicator light flashes when a turn signal light is flashing.

Neutral indicator light "N"

This indicator light comes on when the transmission is in the neutral position.

High beam indicator light "≣O"

This indicator light comes on when the high beam of the headlight is switched on.

This warning light comes on when the engine is overheating. If this occurs, stop the engine immediately and allow the engine to cool. (See page 7-38.) For vehicles with a radiator fan, the radiator fan(s) automatically switch on or off according to the coolant temperature.

TIP.

When the vehicle is turned on, the light will come on for a few seconds, and then go off. If the light does not come on, or if the light remains on, have a Yamaha dealer check the vehicle.

ECA10022

NOTICE

Do not continue to operate the engine if it is overheating.

Engine trouble warning light "5"

This warning light comes on if a problem is detected in the engine or other vehicle control system. If this occurs, have a Yamaha dealer check the onboard diagnostic system.

TIP ____

EAU11081

EAU11449

When the vehicle is turned on, this light should come on for a few seconds and then go off. Otherwise, have a Yamaha dealer check the vehicle.

FAI 186813

Multi-function meter unit

- 1. Transmission gear display
- 2. Tachometer
- 3. Speedometer
- 4. Fuel meter
- 5. "RESET/SELECT" button
- 6. Multi-function display

WARNING

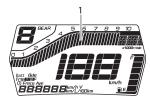

Be sure to stop the vehicle before making any setting changes to the multi-function meter unit. Changing settings while riding can distract the operator and increase the risk of an accident.

1. Speedometer

The speedometer shows the vehicle's traveling speed.

Tachometer

1. Tachometer

The tachometer allows the rider to monitor the engine speed and keep it within the ideal power range.

ECA10032

FAU87220

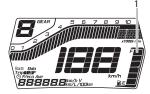

NOTICE

FAL 186831

FAU87170

Do not operate the engine in the tachometer red zone. Red zone: 9250 r/min and above

Fuel meter

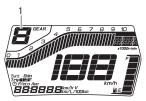

1. Fuel meter

The fuel meter indicates the amount of fuel in the fuel tank. The display segments of the fuel meter disappear from "F" (full) towards "E" (empty) as the fuel level decreases. When approximately

0.8 L (0.22 US gal. 0.19 Imp.gal) of fuel remains, the last segment starts flashing. Refuel as soon as possible.

EAU87391

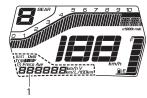

Transmission gear display

1. Transmission gear display

This display shows the selected gear. The neutral position is indicated by "-" and by the neutral indicator light.

Multi-function display

1. Multi-function display

The multi-function display is equipped with the following:

- an odometer (ODO)
- two tripmeters (TRIP 1 and TRIP 2)
- a fuel reserve tripmeter (TRIP F)
- a clock
- an instantaneous fuel consumption display (km/L or L/100 km)
- an average fuel consumption display (AVE_ _._ km/L or AVE_ _._ L/100 km)
- an average speed display (AVE) _._ km/h)
- a battery voltage display (BATT)

Push the "RESET/SELECT" button to change the display in the following order:

 $ODO \rightarrow TRIP 1 \rightarrow TRIP 2 \rightarrow TRIP F \rightarrow$ clock \rightarrow km/L or L/100 km \rightarrow AVE . km/L or AVE_ _._ L/100 km \rightarrow AVE_ _._ $km/h \rightarrow BATT \rightarrow ODO$

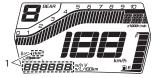

TIP

EAU93772

The fuel reserve tripmeter appears only when you are low on fuel.

FAU86890

1. Odometer

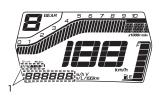

The odometer shows the total distance traveled by the vehicle.

FAL ISSOED

TIP _____

The odometer will lock at 999999 and cannot be reset.

Tripmeters

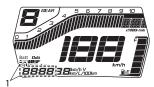

1. Tripmeter

The tripmeters show the distance traveled since they were last reset. To reset a tripmeter, change the display to the tripmeter you want to reset, and then push the "RESET/SELECT" button until it is reset.

TIP _

The tripmeters will reset and continue counting after 9999.9 is reached.

Clock

EAU94070

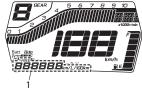

1. Clock

The clock uses a 12-hour time system.

To set the clock

- Push the "RESET/SELECT" button until the hour digits start flashing.
- 2. Use the "RESET/SELECT" button to set the hours.
- Push the "RESET/SELECT" button until the minute digits start flashing.
- 4. Use the "RESET/SELECT" button to set the minutes.
- 5. Push the "RESET/SELECT" button until the minute digits stop flashing. The setting is confirmed.

Instantaneous fuel consumption display

^{1.} Instantaneous fuel consumption display

This display shows the fuel consumption under the current riding conditions. It can be set to either "km/L" or "L/100 km". To switch the fuel consumption measurement units, push the "RESET/SELECT" button until the measurement units change.

- "km/L": the distance that can be traveled on 1.0 L of fuel.
- "L/100 km": the amount of fuel necessary to travel 100 km.

TIP_

When traveling under 10 km/h (6 mi/h), "_ _._" is displayed.

EAU87790

TIP ____

The instantaneous fuel consumption function should be used for general reference only. Do not use this figure to estimate the distance that can be traveled on the current tank of fuel.

Average fuel consumption display

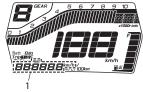

1. Average fuel consumption display

This display shows the average fuel consumption since it was last reset. To reset the display, push the "RE-SET/SELECT" button until it resets.

TIP

- After resetting, "_ _._" is shown until the vehicle has traveled some distance.
- To switch the fuel consumption measurement units between "km/L" and "L/100 km", change at the instantaneous fuel consumption display. (See page 4-6.)

Average speed display

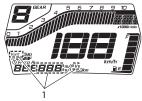

1. Average speed display

This display shows the vehicle's average traveling speed since it was last reset.

To reset the average speed display, push the "RESET/SELECT" button until it is reset.

Battery voltage display

^{1.} Battery voltage display

This display shows the current charge state of the battery.

TIP_

EAU87890

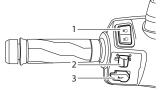

If the battery voltage is less than 9.0 V, "__._" is displayed.

- 3. Horn switch " "

Right

Dimmer switch "EO/so"

Set this switch to " \equiv O" for the high beam and to " \equiv O" for the low beam.

Turn signal switch "⊲>/⇔"

To signal a right-hand turn, push this switch to " \Rightarrow ". To signal a left-hand turn, push this switch to " \Rightarrow ". When released, the switch returns to the center position. To cancel the turn signal lights, push the switch in after it has returned to the center position.

EAU12501

FAL112713

EAU12402

EAU12461

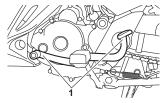

Horn switch " - "

Press this switch to sound the horn.

Start switch "(1)"

Push this switch to crank the engine with the starter. See page 6-2 for starting instructions prior to starting the engine.

Shift pedal

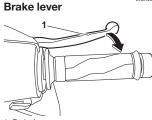

EAU37462

1. Shift pedal

The shift pedal is located on the left side of the motorcycle. This motorcycle is equipped with a constant-mesh 4 speed transmission.

TIP_

Use your toes to shift up and your heel to shift down.

1. Brake lever

The brake lever is located on the right side of the handlebar. To apply the front brake, pull the lever toward the throttle grip. Brake pedal

EAU12892

1. Brake pedal

The brake pedal is located on the right side of the motorcycle. To apply the rear brake, press down on the brake pedal.

Fuel tank cap

EAU12944

EAU37474

•

To remove the fuel tank cap

- 1. Open the seat. (See page 4-12.)
- 2. Turn the fuel tank cap counterclockwise and pull it off.

To install the fuel tank cap

- 1. Fuel tank cap
- 2. "<u>∧</u>" mark
 - Insert the fuel tank cap into the tank opening and turn it clockwise until the "∆" marks on the cap and tank cover are aligned.
 - 2. Close the seat.

A WARNING

Make sure that the fuel tank cap is properly closed after filling fuel. Leaking fuel is a fire hazard.

Fuel

EWA11092

Make sure there is sufficient gasoline in the tank.

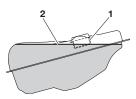

FAL 113233

EWA10882

WARNING

Gasoline and gasoline vapors are extremely flammable. To avoid fires and explosions and to reduce the risk of injury when refueling, follow these instructions.

- Before refueling, turn off the engine and be sure that no one is sitting on the vehicle. Never refuel while smoking, or while in the vicinity of sparks, open flames, or other sources of ignition such as the pilot lights of water heaters and clothes dryers.
- 2. Do not overfill the fuel tank.

^{1.} Fuel tank filler tube

- 2. Maximum fuel level
 - Wipe up any spilled fuel immediately. NOTICE: Immediately wipe off spilled fuel with a clean, dry, soft cloth, since fuel may deteriorate painted surfaces or plastic parts. [ECALOD72]
 - 4. Be sure to securely close the fuel tank cap.

EWA15152

WARNING

Gasoline is poisonous and can cause injury or death. Handle gasoline with care. Never siphon gasoline by mouth. If you should swallow some gasoline or inhale a lot of gasoline vapor, or get some gasoline in your eyes, see your doctor immediately. If recommended by Yamaha because it

can cause damage to the fuel system

or vehicle performance problems.

Instrument and control functions

gasoline spills on your skin, wash with soap and water. If gasoline spills on your clothing, change your clothes.

EAUU0045

Recommended fuel: Regular unleaded gasoline only Fuel tank capacity: 4.6 L (1.2 US gal, 1.0 Imp.gal)

ECA11401

NOTICE

Use only unleaded gasoline. The use of leaded gasoline will cause severe damage to internal engine parts, such as the valves and piston rings, as well as to the exhaust system.

Gasohol

There are two types of gasohol: gasohol containing ethanol and that containing methanol. Gasohol containing ethanol can be used if the ethanol content does not exceed 10% (E10). Gasohol containing methanol is not EAU13435

Catalytic converter

The exhaust system contains catalytic converter(s) to reduce harmful exhaust emissions.

EWA10863

4

A WARNING

The exhaust system is hot after operation. To prevent a fire hazard or burns:

- Do not park the vehicle near possible fire hazards such as grass or other materials that easily burn.
- Park the vehicle in a place where pedestrians or children are not likely to touch the hot exhaust system.
- Make sure that the exhaust system has cooled down before doing any maintenance work.
- Do not allow the engine to idle more than a few minutes. Long idling can cause a build-up of heat.

EAUU0373

Seat

To open the seat

- 1. Place the vehicle on the centerstand.
- 2. Insert the key into the main switch, and then turn it counterclockwise to "OPEN".

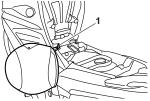

To close the seat

- 1. Fold the seat down, and then push it down to lock it in place.
- Remove the key from the main switch if the vehicle will be left unattended.

TIP

Make sure that the seat is properly secured before riding.

Helmet holders

FAI 137482

1. Helmet holder

The helmet holders are located under the seat.

To secure a helmet to a helmet holder

- 1. Open the seat. (See page 4-12.)
- Attach a helmet to a helmet holder, and then securely close the seat. WARNING! Never ride with a helmet attached to the helmet holder, since the helmet may hit objects, causing loss of control and possibly an accident. [EWATOTE]

2. Seat

1. Seat open

Do not push inward when turning the key.

3. Fold the seat up.

To release a helmet from a helmet holder

Open the seat, remove the helmet from the helmet holder, and then close the seat.

Auxiliary DC connector

This vehicle is equipped with an auxiliary DC connector. Consult your Yamaha dealer before installing any accessories.

Sidestand

EAU70641

The sidestand is located on the left side of the frame. Raise the sidestand or lower it with your foot while holding the vehicle upright.

EWA14191

EAU37491

A WARNING

The vehicle must not be ridden with the sidestand down, or if the sidestand cannot be properly moved up (or does not stay up), otherwise the sidestand could contact the ground and distract the operator, resulting in a possible loss of control.

EAU1559B

EWA11152

Inspect your vehicle each time you use it to make sure the vehicle is in safe operating condition. Always follow the inspection and maintenance procedures and schedules described in the Owner's Manual.

Failure to inspect or maintain the vehicle properly increases the possibility of an accident or equipment damage. Do not operate the vehicle if you find any problem. If a problem cannot be corrected by the procedures provided in this manual, have the vehicle inspected by a Yamaha dealer.

5

Before using this vehicle, check the following points:

ITEM	CHECKS	PAGE
Fuel	Refuel if necessary. Check fuel line for leakage.	4-10
Engine oil	Check oil level in engine. If necessary, add recommended oil to specified level. Check vehicle for oil leakage.	7-11
Coolant	 Check coolant level in reservoir. If necessary, add recommended coolant to specified level. Check cooling system for leakage. 	7-14
Front brake	 Check operation. If soft or spongy, have Yamaha dealer bleed hydraulic system. Check brake pads for wear. Replace if necessary. Check fluid level in reservoir. If necessary, add specified brake fluid to specified level. Check hydraulic system for leakage. 	7-21, 7-22

For your safety – pre-operation checks

ITEM	CHECKS	PAGE
Rear brake	Check operation. If soft or spongy, have Yamaha dealer bleed hydraulic system. Check brake pads for wear. Replace if necessary. Check fluid level in reservoir. If necessary, add specified brake fluid to specified level. Check hydraulic system for leakage.	7-21, 7-22
Throttle grip	Make sure that operation is smooth. Ocheck throttle grip free play. If necessary, have Yamaha dealer adjust throttle grip free play and lubricate cable and grip housing.	7-16, 7-26
Control cables	Make sure that operation is smooth. Lubricate if necessary.	7-25
Drive chain	Check chain slack. Adjust if necessary. Check chain condition. Lubricate if necessary.	7-23, 7-25
Wheels and tires	Check for damage. Check tire condition and tread depth. Check air pressure. Correct if necessary.	7-17, 7-19
Shift pedal	Make sure that operation is smooth. Correct if necessary.	7-20
Brake pedal	Make sure that operation is smooth. Lubricate pedal pivoting point if necessary.	7-26
Brake lever	Make sure that operation is smooth. Lubricate lever pivoting point if necessary.	7-26
Centerstand, sidestand	Make sure that operation is smooth. Lubricate pivots if necessary.	7-27
Chassis fasteners	Make sure that all nuts, bolts and screws are properly tightened. Tighten if necessary.	_

For your safety – pre-operation checks

ITEM	CHECKS	PAGE
Instruments, lights, signals and switches	Check operation. Correct if necessary.	-

Operation and important riding points

EAU15952

Read the Owner's Manual carefully to become familiar with all controls. If there is a control or function you do not understand, ask your Yamaha dealer.

A WARNING

Failure to familiarize yourself with the controls can lead to loss of control, which could cause an accident or injury.

Engine break-in

There is never a more important period in the life of your engine than the period between 0 and 1600 km (1000 mi). For this reason, you should read the following material carefully.

Since the engine is brand new, do not put an excessive load on it for the first 1600 km (1000 mi). The various parts in the engine wear and polish themselves to the correct operating clearances. During this period, prolonged full-throttle operation or any condition that might result in engine overheating must be avoided.

1600 km (1000 mi) and beyond

The vehicle can now be operated normally.

ECA10311

6

NOTICE

- Keep the engine speed out of the tachometer red zone.
- If any engine trouble should occur during the engine break-in period, immediately have a Yamaha dealer check the vehicle.

EAU17104

EAU16842

0-1000 km (0-600 mi)

Avoid prolonged operation above 5000 r/min. *NOTICE:* After 1000 km (600 mi) of operation, the engine oil must be changed and the oil filter element replaced. [ECATITS]

1000-1600 km (600-1000 mi)

Avoid prolonged operation above 6000 r/min.

FAI 103852

Starting the engine

To start the engine

- 1. Turn the main switch to the "ON" position.
- 2. Confirm the indicator and warning light(s) come on for a few seconds, and then go off. (See page 4-3.)

TIP

6

Do not start the engine if the engine trouble warning light remains on.

ECA26710

NOTICE

Do not continue to operate the vehicle if a warning light remains on. Have a Yamaha dealer check the vehicle.

- 3 Shift the transmission into the neutral position.
- 4. Start the engine by pushing the start switch
- 5 Belease the start switch when the engine starts, or after 5 seconds. Wait 10 seconds before pressing the switch again to allow battery voltage to restore.

NOTICE

ECA11043

TIP

The engine cannot be started if the batterv voltage is less than 11.50 volts or the battery is not installed.

EAUV0221

For maximum engine life, never accelerate hard when the engine is cold!

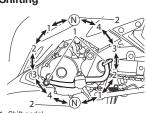

Operation and important riding points

EAUN0073 ECAN0072

Shifting

NOTICE

Do not ride through deep water, otherwise the engine may be damaged. Avoid puddles because they may be deeper than expected.

Shift pedal
 Neutral position

Shifting gears lets you control the amount of engine power available for starting off, accelerating, climbing hills, etc. When shifting gears, fully return the throttle grip. The use of the shift pedal is shown in the illustration.

ECA15182

EAU47842

NOTICE

- When shifting, press the shift pedal firmly until you feel the gear shift is complete.
- Even with the transmission in the neutral position, do not coast for long periods of time with the engine off, nor tow the

motorcycle for long distances. The transmission is properly lubricated only when the engine is running. Inadequate lubrication may damage the transmission.

 Be sure to fully close the throttle grip when shifting.

Operation and important riding points

Tips for reducing fuel con-

Fuel consumption depends largely on your riding style. Consider the following tips to reduce fuel consumption:

- Shift up swiftly, and avoid high engine speeds during acceleration.
- Do not rev the engine while shifting down, and avoid high engine speeds with no load on the engine.
- Turn the engine off instead of letting it idle for an extended length of time (e.g., in traffic jams, at traffic lights or at railroad crossings).

Parking

When parking, stop the engine, and then remove the key from the main switch.

EWA10312

EAU17214

\Lambda WARNING

- Since the engine and exhaust system can become very hot, park in a place where pedestrians or children are not likely to touch them and be burned.
- Do not park on a slope or on soft ground, otherwise the vehicle may overturn, increasing the risk of a fuel leak and fire.
- Do not park near grass or other flammable materials which might catch fire.

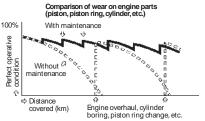

General note

Much can be gained from the correct use and maintenance of a motorcycle.

1. THE CUSTOMERS CAN USE THE FULLEST POTENTIAL OF YAMAHA MOTORCYCLES

2. A MOTORCYCLE CAN KEEP ITS PERFORMANCE CAPABILITY FOR A LONGER TIME

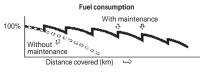

ZAUV0284

EAUV0421

Operation and important riding points

3. FUEL COST AND REPAIR EXPENSES CAN BE KEPT TO A MINIMUM

4. A MOTORCYCLE CAN DEMAND A HIGH PRICE WHEN IT IS TRADED IN AS A USED PRODUCT

EAU17246

Periodic inspection, adjustment, and lubrication will keep your vehicle in the safest and most efficient condition possible. Safety is an obligation of the vehicle owner/operator. The most important points of vehicle inspection, adjustment, and lubrication are explained on the following pages.

The intervals given in the periodic maintenance charts should be simply considered as a general guide under normal riding conditions. However, depending on the weather, terrain, geographical location, and individual use, the maintenance intervals may need to be shortened.

A WARNING

Failure to properly maintain the vehicle or performing maintenance activities incorrectly may increase your risk of injury or death during service or while using the vehicle. If you are not familiar with vehicle service, have a Yamaha dealer perform service.

WARNING

Turn off the engine when performing maintenance unless otherwise specified.

- A running engine has moving parts that can catch on body parts or clothing and electrical parts that can cause shocks or fires.
- Running the engine while servicing can lead to eye injury, burns, fire, or carbon monoxide poisoning – possibly leading to death. See page 2-3 for more information about carbon monoxide.

WARNING

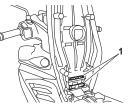

Brake discs, calipers, drums, and linings can become very hot during use. To avoid possible burns, let brake components cool before touching them.

Tool kit

EWA15123

EWA15461

EAU85230

1. Tool kit

The tool kit is in the location shown. The information included in this manual and the tools provided in the tool kit are intended to assist you in the performance of preventive maintenance and minor repairs. However, a torque wrench and other tools are necessary to perform certain maintenance work correctly.

TIP_

If you do not have the tools or experience required for a particular job, have your Yamaha dealer perform it for you.

- TIP_____
 - The annual checks must be performed every year, except if a kilometer-based maintenance is performed instead.
 - From 16000 km, repeat the maintenance intervals starting from 4000 km.
 - Items marked with an asterisk should be performed by a Yamaha dealer as they require special tools, data and technical skills.

EAU18662

TIP _____

- The air filter needs more frequent service if you are riding in unusually wet or dusty areas.
- Hydraulic brake service
 - Regularly check and, if necessary, correct the brake fluid level.
 - Every two years replace the internal components of the brake master cylinder and caliper, and change the brake fluid.
 - Replace the brake hoses every four years and if cracked or damaged.

Removing and installing panels

The panels shown need to be removed to perform some of the maintenance jobs described in this chapter. Refer to this section each time a panel needs to be removed and installed.

1. Panel B

2. Panel A

EAUV0931

To install the panel

Place the panel in the original position, and then install the screws.

To remove the panel Remove the screws, and then pull the panel off as shown.

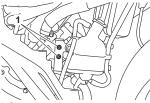

EAU93862

Checking the spark plug

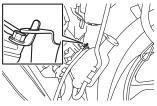

The spark plug is an important engine component, which is easy to check. Since heat and deposits will cause any spark plug to slowly erode, the spark plug should be removed and checked in accordance with the periodic maintenance and lubrication chart. In addition, the condition of the spark plug can reveal the condition of the engine.

To remove the spark plug

- 1. Place the vehicle on the centerstand.
- 2. Remove panel B. (See page 7-8.)
- Remove the coolant reservoir by removing the screws, and then hang it from the projection on the cylinder head as shown.

1. Screw

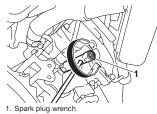

4. Remove the spark plug cap.

1. Spark plug cap

 Remove the spark plug as shown, with the spark plug wrench included in the owner's tool kit.

To check the spark plug

 Check that the porcelain insulator around the center electrode of the spark plug is a medium-to-light tan (the ideal color when the vehicle is ridden normally).

TIP ____

If the spark plug shows a distinctly different color, the engine could be operating improperly. Do not attempt to diagnose such problems yourself. Instead, have a Yamaha dealer check the vehicle.

 Check the spark plug for electrode erosion and excessive carbon or other deposits, and replace it if necessary.

Specified spark plug: NGK/CPB8EA-9

 Measure the spark plug gap with a wire thickness gauge and, if necessary, adjust the gap to specification.

1. Spark plug gap

Spark plug gap:

0.8–0.9 mm (0.031–0.035 in)

To install the spark plug

- Clean the surface of the spark plug gasket and its mating surface, and then wipe off any grime from the spark plug threads.
- Install the spark plug with the spark plug wrench, and then tighten it to the specified torque.

Tightening torque:

Spark plug:

13 N·m (1.3 kgf·m, 9.6 lb·ft)

TIP_

If a torque wrench is not available when installing a spark plug, a good estimate of the correct torque is 1/4– 1/2 turn past finger tight. However, the spark plug should be tightened to the specified torque as soon as possible.

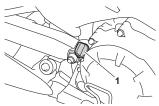

- 3. Install the spark plug cap.
- Install the coolant reservoir by installing the screws.
- 5. Install the panel.

Engine oil and oil filter ele-

The engine oil level should be checked before each ride. In addition, the oil must be changed and the oil filter element replaced at the intervals specified in the periodic maintenance and lubrication chart.

To check the engine oil level

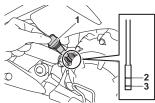

- 1. Place the vehicle on the centerstand. A slight tilt to the side can result in a false reading.
- Start the engine, warm it up for several minutes, and then turn it off.
- Wait a few minutes until the oil settles, remove the oil filler cap, wipe the dipstick clean, insert it back into the oil filler hole (without screwing it in), and then remove it again to check the oil level.

1. Engine oil filler cap

TIP

The engine oil should be between the tip of the dipstick and the maximum level mark.

- 1. Engine oil dipstick
- 2. Maximum level mark
- 3. Minimum level mark

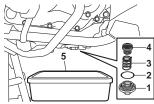

- If the engine oil is at or below the minimum level mark, add sufficient oil of the recommended type to raise it to the correct level.
- Insert the dipstick into the oil filler hole, and then tighten the oil filler cap.

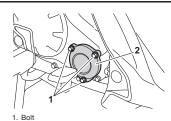

To change the engine oil (with or without oil filter element replacement)

 Start the engine, warm it up for several minutes, and then turn it off.

7

- 2. Place an oil pan under the engine to collect the used oil.
- 3. Remove the engine oil filler cap and drain bolt along with the Oring, compression spring, and engine oil strainer, to drain the oil from the crankcase. NOTICE: When removing the engine oil drain bolt, the O-ring, compression spring, and oil strainer will fall out. Take care not to lose these parts. [ECATION]

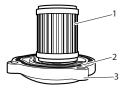

- 1. Engine oil drain bolt
- 2. O-ring
- 3. Compression spring
- 4. Strainer
- 5. Oil pan
 - Clean the engine oil strainer with solvent, and then check it for damage and replace it if necessary.

TIP_

Skip steps 5–7 if the oil filter element is not being replaced.

5. Remove the oil filter element cover by removing the bolts.

- 2. Oil filter element cover
- 6. Remove and replace the oil filter element and O-ring.

- 1. Oil filter element
- 2. O-ring
- 3. Oil filter element cover

 Install the oil filter element cover by installing the bolts, then tightening them to the specified torque.

Tightening torque:

Oil filter element cover bolt: 10 N·m (1.0 kgf·m, 7.4 lb·ft)

TIP ____

Make sure that the O-ring is properly seated.

 Install the engine oil strainer, compression spring, new O-ring and engine oil drain bolt, and then tighten the drain bolt to the specified torque. NOTICE: Before installing the engine oil drain bolt, do not forget to install the Oring, compression spring, and oil strainer in position. [ECANO422]

Tightening torque: Engine oil drain bolt: 32 N·m (3.2 kgf·m, 24 lb·ft)

7

 Refill with the specified amount of the recommended engine oil, and then install and tighten the oil filler cap.

Recommended engine oil: See page 9-1. Oil quantity: Oil change: 0.90 L (0.95 US qt, 0.79 Imp.qt) With oil filter removal:

1.00 L (1.06 US qt, 0.88 Imp.qt)

TIP _____

Be sure to wipe off spilled oil on any parts after the engine and exhaust system have cooled down.

ECA11621

NOTICE

 In order to prevent clutch slippage (since the engine oil also lubricates the clutch), do not mix any chemical additives. Do not use oils with a diesel specification of "CD" or oils of a higher quality than specified. In addition, do not use oils labeled "ENERGY CONSERVING II" or higher.

• Make sure that no foreign material enters the crankcase.

- Start the engine, and then let it idle for several minutes while checking it for oil leakage. If oil is leaking, immediately turn the engine off and check for the cause.
- 11. Turn the engine off, and then check the oil level and correct it if necessary.

Why Yamalube

YAMALUBE oil is a Genuine YAMAHA Part born of the engineers' passion and belief that engine oil is an important liquid engine component. We form teams of specialists in the fields of mechanical engineering, chemistry, electronics and track testing, and have them develop the engine together with the oil it will use. Yamalube oils take full advantage of the base oil's qualities and blend in the ideal balance of additives to make sure the final oil clears our performance standards. Thus, Yamalube mineral, semisynthetic and synthetic oils have their own distinct characters and value. Yamaha's experience gained over many years of research and development into oil since the 1960's helps make Yamalube the best choice for your Yamaha engine.

FAL185450

FALIS1203

Coolant

The coolant level should be checked regularly. In addition, the coolant must be changed at the intervals specified in the periodic maintenance chart.

Recommended coolant: YAMALUBE coolant Coolant quantity:

Coolant reservoir (max level mark): 0.15 L (0.16 US qt, 0.14 Imp.qt) Radiator (including all routes): 0.62 L (0.66 US qt, 0.55 Imp.qt)

7

TIP

If genuine Yamaha coolant is not available, use an ethylene glycol antifreeze containing corrosion inhibitors for aluminum engines and mix with distilled water at a 1:1 ratio.

EAU93871

To check the coolant level

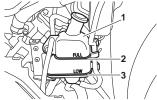

1. Place the vehicle on the centerstand.

TIP

- The coolant level must be checked on a cold engine since the level varies with engine temperature.
- Make sure that the vehicle is positioned straight up when checking the coolant level. A slight tilt to the side can result in an incorrect reading.
- 2. Remove panel B. (See page 7-8.)
- Check the coolant level in the coolant reservoir.

TIP _

The coolant should be between the minimum and maximum level marks.

1. Coolant reservoir

2. Maximum level mark

3. Minimum level mark

- 4. If the coolant is at or below the minimum level mark, remove the coolant reservoir cap.
- 5. Add coolant to the maximum level mark, and then install the reservoir cap. WARNING! Remove only the coolant reservoir cap. Never attempt to remove the radiator cap when the engine is hot. [EVALISTICE] NOTICE: If coolant is not available, use distilled water or soft tap water instead. Do not use hard water or salt water since it is harmful to the engine. If water has been used instead of coolant, replace it with cool-

FAI 133032

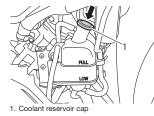

ant as soon as possible, otherwise the cooling system will not be protected against frost and corrosion. If water has been added to the coolant, have a Yamaha dealer check the antifreeze content of the coolant as soon as possible, otherwise the effectiveness of the coolant will be reduced. [ECAIOT3]

Changing the coolant

The coolant must be changed at the intervals specified in the periodic maintenance and lubrication chart. Have a Yamaha dealer change the coolant. WARNING! Never attempt to remove the radiator cap when the engine is hot. [EWA10382]

Replacing the air filter ele-

The air filter element must be replaced and the check hoses must be cleaned at the intervals specified in the periodic maintenance and lubrication chart. Have a Yamaha dealer replace the air filter element.

Coolant reservoir capacity (up to the maximum level mark): 0.15 L (0.16 US qt, 0.14 Imp.qt)

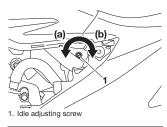

6. Install the panel.

Adjusting the engine idling speed

The engine idling speed must be checked and, if necessary, adjusted as follows at the intervals specified in the periodic maintenance and lubrication chart.

The engine should be warm before making this adjustment.

- 1. Remove panel A. (See page 7-8.)
- Check the engine idling speed and, if necessary, adjust it to specification by turning the idle adjusting screw. To increase the engine idling speed, turn the screw in direction (a). To decrease the engine idling speed, turn the screw in direction (b).

Engine idling speed: 1300–1500 r/min

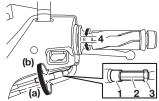

TIP.

If the specified idling speed cannot be obtained as described above, have a Yamaha dealer make the adjustment.

3. Install the panel.

Adjusting the throttle grip free play

Measure the throttle grip free play as shown.

1. Rubber cover

- 2. Throttle grip free play adjusting nut
- 3. Locknut
- 4. Throttle grip free play

Throttle grip free play:

3.0-7.0 mm (0.12-0.28 in)

Periodically check the throttle grip free play and, if necessary, adjust it as follows.

TIP

The engine idling speed must be correctly adjusted before checking and adjusting the throttle grip free play.

- 1. Slide the rubber cover back.
- 2. Loosen the locknut.
- 3. To increase the throttle grip free play, turn the adjusting nut in direction (a). To decrease the throttle grip free play, turn the adjusting nut in direction (b).
- 4. Tighten the locknut and then slide the rubber cover to its original position.

Valve clearance

The valves are an important engine component, and since valve clearance changes with use, they must be checked and adjusted at the intervals specified in the periodic maintenance chart. Unadjusted valves can result in improper air-fuel mixture, engine noise, and eventually engine damage. To prevent this from occurring, have vour Yamaha dealer check and adjust the valve clearance at regular intervals.

TIP

This service must be performed when the engine is cold.

FAI 121403

Tires

Tires are the only contact between the vehicle and the road. Safety in all conditions of riding depends on a relatively small area of road contact. Therefore, it is essential to maintain the tires in good condition at all times and replace them at the appropriate time with the specified tires

Tire air pressure

The tire air pressure should be checked and, if necessary, adjusted before each ride

EWA10504

FAI 182721

Operation of this vehicle with improper tire pressure may cause severe injury or death from loss of control.

- The tire air pressure must be checked and adjusted on cold tires (i.e., when the temperature of the tires equals the ambient temperature).
- The tire air pressure must be adjusted in accordance with the riding speed and with the total

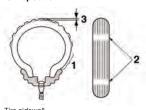

weight of rider, passenger, cargo, and accessories approved for this model.

Cold tire air pressure: 1 person: Front: 175 kPa (1.75 kgf/cm², 25 psi) Rear: 200 kPa (2.00 kgf/cm², 29 psi) 2 persons: Front: 200 kPa (2.00 kgf/cm², 29 psi) Rear: 250 kPa (2.50 kgf/cm², 36 psi) Maximum load: Vehicle: 150 kg (331 lb) The vehicle's maximum load is the combined weight of the rider, passenger, cargo, and any accessories.

EWA10512

A WARNING

Never overload your vehicle. Operation of an overloaded vehicle could cause an accident.

Tire sidewall
 Tire wear indicator

Tire inspection

3. Tire tread depth

The tires must be checked before each ride. If a tire tread shows crosswise lines (minimum tread depth), if the tire has a nail or glass fragments in it, or if the sidewall is cracked, contact a Yamaha dealer immediately and have the tire replaced.

Minimum tire tread depth (front and rear): 1.0 mm (0.04 in)

- It is dangerous to ride with a worn-out tire. When a tire tread begins to show crosswise lines, have a Yamaha dealer replace the tire immediately.
- The replacement of all wheel and brake-related parts, including the tires, should be left to a Yamaha dealer, who has the necessary professional knowledge and experience to do so.
- Ride at moderate speeds after changing a tire since the tire surface must first be "broken in" for it to develop its optimal characteristics.

Tire information

This model is equipped with tubeless tires and tire air valves.

Tires age, even if they have not been used or have only been used occasionally. Cracking of the tread and sidewall rubber, sometimes accompanied by carcass deformation, is an evidence of

EWA10583

FAI 121963

ageing. Old and aged tires shall be checked by tire specialists to ascertain their suitability for further use.

The front and rear tires should be of the same make and design, otherwise the handling characteristics of the vehicle may be different, which could lead to an accident.

After extensive tests, only the tires listed below have been approved for this model by Yamaha.

Front tire:

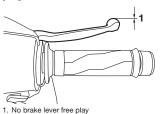

Size: 70/90-17M/C 38P Manufacturer/model: VEE RUBBER/V421F Rear tire: Size: 80/90-17M/C 50P Manufacturer/model: VEE RUBBER/V421R

Cast wheels

To maximize the performance, durability, and safe operation of your vehicle, note the following points regarding the specified wheels.

- The wheel rims should be checked for cracks, bends, warpage or other damage before each ride. If any damage is found, have a Yamaha dealer replace the wheel. Do not attempt even the smallest repair to the wheel. A deformed or cracked wheel must be replaced.
- The wheel should be balanced whenever either the tire or wheel has been changed or replaced. An unbalanced wheel can result in poor performance, adverse handling characteristics, and a shortened tire life.

There should be no free play at the brake lever end. If there is free play, have a Yamaha dealer inspect the brake system.

EWA14212

7

A WARNING

A soft or spongy feeling in the brake lever can indicate the presence of air in the hydraulic system. If there is air in the hydraulic system, have a Yamaha dealer bleed the system before operating the vehicle. Air in the hydraulic system will diminish the braking performance, which may result in loss of control and an accident.

Checking the shift pedal

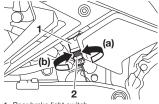

The operation of the shift pedal should be checked before each ride. If operation is not smooth, have a Yamaha dealer check the vehicle.

EAU44821

Brake light switches

The brake light is activated by switches connected to the brake lever and brake pedal. Check that the brake light comes on just before braking takes effect. If necessary, adjust the rear brake light switch as follows.

EAU22275

Rear brake light switch
 Rear brake light switch adjusting nut

Turn the rear brake light switch adjusting nut while holding the rear brake light switch in place. To make the brake light come on earlier, turn the adjusting nut in direction (a). To make the brake light come on later, turn the adjusting nut in direction (b).

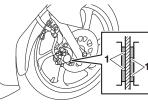

TIP_

The front brake light switch should be serviced by a Yamaha dealer.

Checking the front and rear brake pads

The front and rear brake pads must be checked for wear at the intervals specified in the periodic maintenance and lubrication chart.

Front brake pads

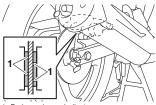

1. Brake pad wear indicator groove

Each front brake pad is provided with wear indicator grooves, which allow you to check the brake pad wear without having to disassemble the brake. To check the brake pad wear, check the wear indicator grooves. If a brake pad has worn to the point that the wear indicator grooves have almost disappeared, have a Yamaha dealer replace the brake pads as a set.

Rear brake pads

EAU22434

EAU36721

1. Brake pad wear indicator groove

Each rear brake pad is provided with wear indicator grooves, which allow you to check the brake pad wear without having to disassemble the brake. To check the brake pad wear, check the wear indicator grooves. If a brake pad has worn to the point that the wear indicator grooves have almost disappeared, have a Yamaha dealer replace the brake pads as a set.

Checking the brake fluid level

Before riding, check that the brake fluid is above the minimum level mark. Check the brake fluid level with the top of the reservoir level. Replenish the brake fluid if necessary.

Front brake

1. Minimum level mark

Rear brake

1. Minimum level mark

Specified brake fluid: DOT 3 or DOT 4

EWA15981

MARNING

Improper maintenance can result in loss of braking ability. Observe these precautions:

- Insufficient brake fluid may allow air to enter the brake system, reducing braking performance.
- Clean the filler cap before removing. Use only DOT 3 or DOT 4 brake fluid from a sealed container.

- Use only the specified brake fluid; otherwise, the rubber seals may deteriorate, causing leakage.
- Refill with the same type of brake fluid. Adding a brake fluid other than DOT 3 or DOT 4 may result in a harmful chemical reaction.
- Be careful that water does not enter the brake fluid reservoir when refilling. Water will significantly lower the boiling point of the fluid and may result in vapor lock.

ECA17641

NOTICE

Brake fluid may damage painted surfaces or plastic parts. Always clean up spilled fluid immediately.

As the brake pads wear, it is normal for the brake fluid level to gradually go down. A low brake fluid level may indicate worn brake pads and/or brake system leakage; therefore, be sure to check the brake pads for wear and the brake system for leakage. If the brake fluid level goes down suddenly, have a Yamaha dealer check the cause before further riding.

Changing the brake fluid

Have a Yamaha dealer change the brake fluid at the intervals specified in the periodic maintenance and lubrication chart. In addition, have the oil seals of the brake master cylinder and caliper as well as the brake hose replaced at the intervals listed below or whenever they are damaged or leaking.

- Brake seals: Replace every two years.
- Brake hose: Replace every four years.

Drive chain slack

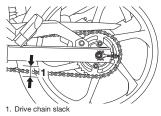

The drive chain slack should be checked before each ride and adjusted if necessary.

EAU22799

EAU22762

To check the drive chain slack

- 1. Place the motorcycle on the centerstand.
- 2. Shift the transmission into the neutral position.
- 3. Measure the drive chain slack as shown.

Drive chain slack: 25.0–35.0 mm (0.98–1.38 in)

4. If the drive chain slack is incorrect, adjust it as follows. NOTICE: Improper drive chain slack will overload the engine as well as other vital parts of the motorcycle and can lead to chain slippage or breakage. To prevent this from occurring, keep the drive chain slack within the specified limits. JECA10072]

EAU66612

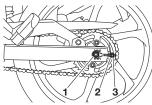

To adjust the drive chain slack

Consult a Yamaha dealer before adjusting the drive chain slack.

- Loosen the locknut at each end of the swingarm, and then loosen the axle nut and the brake caliper bracket bolt.
- To tighten the drive chain, turn the drive chain slack adjusting nut at each end of the swingarm in direction (a). To loosen the drive chain, turn the adjusting nut at each end of the swingarm in direction (b), and then push the rear wheel forward.

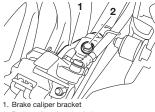

TIP_

Using the alignment marks on each drive chain puller, make sure that both chain pullers are in the same position for proper wheel alignment.

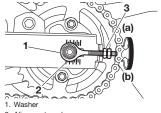

- 1. Axle nut
- 2. Drive chain slack adjusting nut

Locknut

2. Brake caliper bracket bolt

- 2. Alignment marks
- 3. Drive chain slack adjusting nut
 - Tighten the axle nut, the brake caliper bracket bolt, and then tighten the locknuts to the specified torques.

Tightening torques: Axle nut: 60 N·m (6.0 kgf·m, 44 lb·ft) Brake caliper bracket bolt: 64 N·m (6.4 kgf·m, 47 lb·ft) Locknut: 7 N·m (0.7 kgf·m, 5.2 lb·ft)

 Make sure that the drive chain pullers are in the same position, the drive chain slack is correct, and the drive chain moves smoothly.

Cleaning and lubricating the drive chain

The drive chain must be cleaned and lubricated at the intervals specified in the periodic maintenance and lubrication chart, otherwise it will quickly wear out, especially when riding in dusty or wet areas. Service the drive chain as follows.

NOTICE

The drive chain must be lubricated after washing the motorcycle, riding in the rain or riding in wet areas.

1. Remove all dirt and mud from the drive chain with a brush or cloth.

TIP_

For a thorough cleaning, have a Yamaha dealer remove the drive chain and soak it in solvent.

 Spray Yamaha chain lubricant or other suitable chain lubricant on the entire chain, making sure that all side plates and rollers have been sufficiently oiled.

Checking and lubricating the cables

The operation of all control cables and the condition of the cables should be checked before each ride, and the cables and cable ends should be lubricated if necessary. If a cable is damaged or does not move smoothly, have a Yamaha dealer check or replace it. WARNING! Damage to the outer housing of cables may result in internal rusting and cause interference with cable movement. Replace damaged cables as soon as possible to prevent unsafe conditions.[EWI0772]

Recommended lubricant:

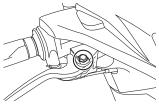

Yamaha cable lubricant or other suitable cable lubricant

Checking and lubricating the throttle grip and cable

The operation of the throttle grip should be checked before each ride. In addition, the cable should be lubricated by a Yamaha dealer at the intervals specified in the periodic maintenance chart.

The throttle cable is equipped with a rubber cover. Make sure that the cover is securely installed. Even though the cover is installed correctly, it does not completely protect the cable from water entry. Therefore, use care not to pour water directly onto the cover or cable when washing the vehicle. If the cable or cover becomes dirty, wipe clean with a moist cloth.

Checking and lubricating the brake lever

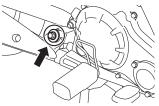

The operation of the brake lever should be checked before each ride, and the lever pivot should be lubricated if necessary.

Recommended lubricant: Silicone grease

Checking and lubricating the brake pedal

The operation of the brake pedal should be checked before each ride, and the pedal pivot should be lubricated if necessary.

Recommended lubricant: Lithium-soap-based grease

Checking and lubricating the centerstand and sidestand

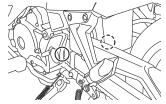

The operation of the centerstand and sidestand should be checked before each ride, and the pivots and metal-tometal contact surfaces should be lubricated if necessary.

EWA10742

A WARNING

If the centerstand or sidestand does not move up and down smoothly, have a Yamaha dealer check or repair it. Otherwise, the centerstand or sidestand could contact the ground and distract the operator, resulting in a possible loss of control. Recommended lubricant: Lithium-soap-based grease Lubricating the swingarm pivots

The swingarm pivots must be lubricated by a Yamaha dealer at the intervals specified in the periodic maintenance and lubrication chart.

Recommended lubricant: Lithium-soap-based grease

EAU23273

Checking the front fork

The condition and operation of the front fork must be checked as follows at the intervals specified in the periodic maintenance and lubrication chart.

To check the condition

Check the inner tubes for scratches, damage and excessive oil leakage.

To check the operation

- Place the vehicle on a level surface and hold it in an upright position. WARNING! To avoid injury, securely support the vehicle so there is no danger of it falling over. [BWA0729]
- While applying the front brake, push down hard on the handlebars several times to check if the front fork compresses and rebounds smoothly.

NOTICE

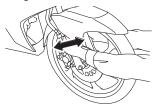

If any damage is found or the front fork does not operate smoothly, have a Yamaha dealer check or repair it.

Checking the steering

Worn or loose steering bearings may cause danger. Therefore, the operation of the steering must be checked as follows at the intervals specified in the periodic maintenance and lubrication chart.

FAI 145512

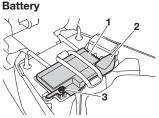

- Place the vehicle on the centerstand. WARNING! To avoid injury, securely support the vehicle so there is no danger of it falling over. [EWA10782]
- Hold the lower ends of the front fork legs and try to move them forward and backward. If any free play can be felt, have a Yamaha dealer check or repair the steering.

FAI 150202

The front and rear wheel bearings must be checked at the intervals specified in the periodic maintenance and lubrication chart. If there is play in the wheel hub or if the wheel does not turn smoothly, have a Yamaha dealer check the wheel bearings.

1. Battery

FAI 123202

- 2. Positive battery lead (red)
- 3. Negative battery lead (black)

The battery is located under the seat. (See page 4-12.)

This model is equipped with a VRLA (Valve Regulated Lead Acid) battery. There is no need to check the electrolyte or to add distilled water. However, the battery lead connections need to be checked and, if necessary, tightened.

EWA10761

A WARNING

 Electrolyte is poisonous and dangerous since it contains sulfuric acid, which causes severe burns. Avoid any contact with skin, eyes or clothing and always shield your eyes when working near batteries. In case of contact, administer the following FIRST AID.

- EXTERNAL: Flush with plenty of water.
- INTERNAL: Drink large quantities of water or milk and immediately call a physician.
- EYES: Flush with water for 15 minutes and seek prompt medical attention.
- Batteries produce explosive hydrogen gas. Therefore, keep sparks, flames, cigarettes, etc., away from the battery and provide sufficient ventilation when charging it in an enclosed space.
- KEEP THIS AND ALL BATTER-IES OUT OF THE REACH OF CHILDREN.

To charge the battery

Have a Yamaha dealer charge the battery as soon as possible if it seems to have discharged. Keep in mind that the

battery tends to discharge more quickly if the vehicle is equipped with optional electrical accessories.

ECA16522

NOTICE

To charge a VRLA (Valve Regulated Lead Acid) battery, a special (constant-voltage) battery charger is required. Using a conventional battery charger will damage the battery.

To store the battery

- If the vehicle will not be used for more than one month, remove the battery, fully charge it, and then place it in a cool, dry place. *NOTICE:* When removing the battery, be sure to turn the main switch off, then disconnect the negative lead before disconnecting the positive lead. [ECAREGO]
- If the battery will be stored for more than two months, check it at least once a month and fully charge it if necessary.
- Fully charge the battery before installation. NOTICE: When installing the battery, be sure to turn the main switch off, then

connect the positive lead before connecting the negative lead.

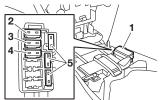

[ECA16842]

 After installation, make sure that the battery leads are properly connected to the battery terminals.

NOTICE

Always keep the battery charged. Storing a discharged battery can cause permanent battery damage.

Replacing the fuses

FAI 103881

- 1. Fuse box
- 2. Main fuse
- 3. Terminal fuse
- 4. Signal fuse
- 5. Spare fuse

The fuse box is located under the seat. (See page 4-12.)

If a fuse is blown, replace it as follows.

- Turn the main switch off and turn off all electrical circuits in question.
- Remove the blown fuse, and then install a new fuse of the specified amperage. WARNING! Do not use a fuse of a higher amperage rating than recommended to

avoid causing extensive damage to the electrical system and possibly a fire. [EWA15132]

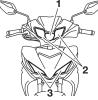

Specified fuses:

Main fuse: 15.0 A Terminal fuse: 5.0 A Signaling system fuse: 10.0 A

- Turn the main switch on, and turn on the electrical circuit in question to check if the device operates.
- If the fuse immediately blows again, have a Yamaha dealer check the electrical system.

Vehicle lights

This model is equipped with LED lights for headlights, auxiliary lights and brake/tail light. If a light does not come on, check the fuse and then have a Yamaha dealer check the vehicle.

- 1. Headlight (high beam)
- 2. Headlight (low beam)

3. Auxiliary light

NOTICE

Do not affix any type of tinted film or stickers to the headlight lens.

EAUN2261

EC416581

Replacing a front turn signal light bulb

ECA10671

7

NOTICE

It is advisable to have a Yamaha dealer perform this job.

- 1. Place the vehicle on the centerstand.
- 2. Remove panel A and B. (See page 7-8.)
- Remove the turn signal light bulb socket (together with the bulb) by turning it counterclockwise.

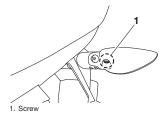

^{1.} Turn signal light bulb socket

- Remove the burnt out bulb by pulling it out.
- 5. Insert a new bulb into the socket.

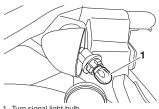

- 6. Install the socket (together with the bulb) by turning it clockwise.
- 7. Install the panels.

FALIV0960 Replacing a rear turn signal light bulb

1. Remove the turn signal light unit by removing the screw.

- 2. Remove the socket (together with the turn signal light bulb) by turning it counterclockwise.
- 3. Remove the burnt-out bulb by pulling it outward.

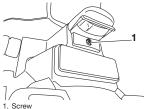

1. Turn signal light bulb

- 4 Insert a new bulb into the socket
- 5. Install the socket (together with the bulb) by turning it clockwise.
- 6. Install the turn signal light unit by installing the screw. NOTICE: Do not overtighten the screw, otherwise the lens may break.

[ECA11192]

EAUM3510 Replacing the license plate light bulb

1. Remove the license plate light unit by removing the screw.

- 2. Remove the license plate light bulb socket (together with the bulb) by pulling it out.

- 1. License plate light bulb
- 3. Remove the burnt-out bulb by pullina it out.
- 4 Insert a new bulb into the socket
- 5. Install the socket (together with the bulb) by pushing it in.
- 6. Install the license plate light unit by installing the screw.

Front wheel

FAU60841

FAI 124361

To remove the front wheel

FWA10822

7

WARNING

To avoid injury, securely support the vehicle so there is no danger of it falling over.

- 1. Place the motorcycle on the centerstand
- 2 Remove the axle nut

1. Axle nut

3. Pull the wheel axle out, and then remove the wheel NOTICE: Do not apply the brake after the

wheel and brake disc have been removed, otherwise the brake pads will be forced shut, [ECA11073]

To install the front wheel

- 1. Lift the wheel up between the fork legs.
- 2. Insert the wheel axle, and then install the axle nut.
- Take the motorcycle off the centerstand so that the front wheel is on the ground.
- 4. Tighten the axle nut to the specified torque.

Tightening torque:

Axle nut: 40 N·m (4.0 kgf·m, 30 lb·ft)

TIP_

7

When tightening the axle nut, hold the wheel axle with a wrench to keep it from turning.

 While applying the front brake, push down hard on the handlebars several times to check if the front fork compresses and rebounds smoothly.

Rear wheel

FAU66621

FWA10822

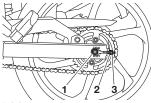

FAI 125081

To remove the rear wheel

A WARNING

To avoid injury, securely support the vehicle so there is no danger of it falling over.

- 1. Loosen the locknut and drive chain slack adjusting nut on each side of the swingarm.
- 2. Loosen the axle nut and the brake caliper bracket bolt.

- 1. Axle nut
- 2. Drive chain slack adjusting nut
- 3. Locknut

- 1. Rear wheel
- 2. Wheel axle
- 3. Brake caliper bracket bolt
- 4. Brake caliper bracket
 - 3. Place the motorcycle on the centerstand.
 - 4. Remove the axle nut.
 - 5. Push the wheel forward, and then remove the drive chain from the rear sprocket.

TIP.

The drive chain does not need to be disassembled in order to remove and install the rear wheel.

While supporting the brake caliper and slightly lifting the wheel, pull the wheel axle out.

TIP_____

A rubber mallet may be useful to tap the wheel axle out.

 Remove the wheel. NOTICE: Do not apply the brake after the wheel and brake disc have been removed, otherwise the brake pads will be forced shut. [ECA11073]

To install the rear wheel

 Install the wheel and the brake caliper bracket by inserting the wheel axle from the right-hand side.

TIP_____

- Make sure that the slot in the brake caliper bracket is fit over the retainer on the swingarm.
- Make sure that there is enough space between the brake pads before installing the wheel.
- 2. Install the drive chain onto the rear sprocket.
- 3. Install the axle nut.
- Adjust the drive chain slack. (See page 7-23.)

- 5. Take the motorcycle off the centerstand so that the rear wheel is on the ground, and then put the sidestand down.
- 6. Tighten the axle nut, the brake caliper bracket bolt, and then tighten the locknuts to the specified torques.

Tightening torques:

Axle nut:

60 N·m (6.0 kgf·m, 44 lb·ft) Brake caliper bracket bolt: 64 N·m (6.4 kgf·m, 47 lb·ft) Locknut: 7 N·m (0.7 kgf·m, 5.2 lb·ft)

Troubleshooting

Although Yamaha motorcycles receive a thorough inspection before shipment from the factory, trouble may occur during operation. Any problem in the fuel, compression, or ignition systems, for example, can cause poor starting and loss of power.

The following troubleshooting charts represent quick and easy procedures for checking these vital systems yourself. However, should your motorcycle require any repair, take it to a Yamaha dealer, whose skilled technicians have the necessary tools, experience, and know-how to service the motorcycle properly.

Use only genuine Yamaha replacement parts. Imitation parts may look like Yamaha parts, but they are often inferior, have a shorter service life and can lead to expensive repair bills.

EWA15142

FAI 125872

A WARNING

When checking the fuel system, do not smoke, and make sure there are no open flames or sparks in the area, including pilot lights from water

heaters or furnaces. Gasoline or gasoline vapors can ignite or explode, causing severe injury or property damage.

Troubleshooting chart

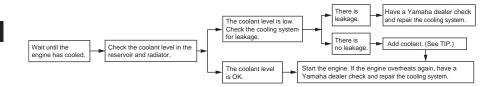

1. Fuel There is enough fuel. Check the battery. Check the fuel level in the fuel tank. The engine does not start. There is no fuel. Supply fuel. Check the battery. 2. Battery The engine turns over The battery is good. quickly. The engine does not start. Operate the electric starter. Check the ignition. Check the battery lead connections, The engine turns over and charge the battery if necessary. slowly. 3. Ignition Wipe off with a dry cloth and correct the Wet Try starting the engine. spark plug gap, or replace the spark plug(s). Remove the spark plug and check the electrodes. The engine does not start. Have a Yamaha dealer check the vehicle. Dry Check the compression. 4. Compression The engine does not start. There is compression. Have a Yamaha dealer check the vehicle. Try starting the engine. There is no compression. Have a Yamaha dealer check the vehicle

EAU86350

Engine overheating

M WARNING

- Do not remove the radiator cap when the engine and radiator are hot. Scalding hot fluid and steam may be blown out under pressure, which could cause serious injury. Be sure to wait until the engine has cooled.
- Place a thick rag, like a towel, over the radiator cap, and then slowly rotate the cap counterclockwise to the
 detent to allow any residual pressure to escape. When the hissing sound has stopped, press down on the cap
 while turning it counterclockwise, and then remove the cap.

TIP

If coolant is not available, tap water can be temporarily used instead, provided that it is changed to the recommended coolant as soon as possible.

Matte color caution

EAU37834 ECA15193

NOTICE

Some models are equipped with matte colored finished parts. Be sure to consult a Yamaha dealer for advice on what products to use before cleaning the vehicle. Using a brush, harsh chemical products or cleaning compounds when cleaning these parts will scratch or damage their surface. Wax also should not be applied to any matte colored finished parts. Frequent, thorough cleaning of the vehicle will not only enhance its appearance but also will improve its general performance and extend the useful life of many components. Washing, cleaning, and polishing will also give you a chance to inspect the condition of the vehicle more frequently. Be sure to wash the vehicle after riding in the rain or near the sea, because salt is corrosive to metals.

TIP_

Care

- Genuine Yamaha care and maintenance products are sold under the YAMALUBE brand in many markets worldwide.
- See your Yamaha dealer for additional cleaning tips.

ECA26280

FAI 18/1990

NOTICE

Improper cleaning can cause cosmetic and mechanical damage. Do not use:

 high-pressure washers or steam-jet cleaners. Excessive water pressure may cause water seepage and deterioration of wheel bearings, brakes, transmission seals and electrical devices. Avoid high-pressure detergent applications such as those available in coin-operated car washers.

- harsh chemicals, including strong acidic wheel cleaners, especially on spoke or magnesium wheels.
- harsh chemicals, abrasive cleaning compounds, or wax on matte-finished parts. Brushes can scratch and damage the matte-finish, use soft sponge or towel only.
- towels, sponges, or brushes contaminated with abrasive cleaning products or strong chemicals such as, solvents, gasoline, rust removers, brake fluid, or antifreeze, etc.

Before washing

 Park the vehicle out of direct sunlight and allow it to cool. This will help avoid water spots.

Motorcycle care and storage

- 2. Make sure all caps, covers, electrical couplers and connectors are tightly installed.
- 3. Cover the muffler end with a plastic bag and a strong rubber band.
- 4 Pre-soak stubborn stains like insects or bird droppings with a wet towel for a few minutes
- 5. Remove road grime and oil stains with a quality degreasing agent and a plastic-bristle brush or sponde. NOTICE: Do not use degreasing agent on areas requiring lubrication such as seals, gaskets, and wheel axles. Follow product instructions. [ECA26290]

8

Washing

 Rinse off any degreaser and spray down the vehicle with a garden hose. Use only enough pressure to do the job. Avoid spraying water directly into the muffler, instrument panel, air inlet, or other inner areas such as underseat storage compartments.

- 2. Wash the vehicle with a quality automotive-type detergent mixed with cool water and a soft, clean towel or sponge. Use an old toothbrush or plastic-bristle brush for hard-to-reach places. NOTICE: Use cold water if the vehicle has been exposed to salt. Warm water will increase salt's corrosive properties. [ECA26301]
- 3. For windshield-equipped vehicles: Clean the windshield with a soft towel or sponge dampened with water and a pH neutral detergent. If necessary, use a high-guality windshield cleaner or polish for motorcycles. NOTICE: Never use any strong chemicals to clean the windshield. Additionally. some cleaning compounds for plastic may scratch the windshield, so be sure to test all cleaning products before general application. [ECA26310]
- 4. Rinse off thoroughly with clean water. Be sure to remove all detergent residues, as they can be harmful to plastic parts.

8-2

After washing

- 1. Drv the vehicle with a chamois or absorbent towel, preferably microfiber terrvcloth.
- 2. For drive chain-equipped models: Drv and then lubricate the drive chain to prevent rust.
- 3. Use a chrome polish to shine chrome, aluminum, and stainless steel parts. Often the thermally induced discoloring of stainless steel exhaust systems can be removed through polishing.
- 4. Apply a corrosion protection spray on all metal parts including chrome or nickel-plated surfaces. WARNING! Do not apply silicone or oil spray to seats, hand grips, rubber foot pegs or tire treads. Otherwise these parts will become slippery, which could cause loss of control. Thoroughly clean the surfaces of these parts before operating the vehicle. IEWA206501
- 5. Treat rubber, vinyl, and unpainted plastic parts with a suitable care product.

Motorcycle care and storage

- 6. Touch up minor paint damage caused by stones, etc.
- Wax all painted surfaces using a non-abrasive wax or use a detail spray for motorcycles.
- When finished cleaning, start the engine and let it idle for several minutes to help dry any remaining moisture.
- If the headlight lens has fogged up, start the engine and turn on the headlight to help remove the moisture.
- 10. Let the vehicle dry completely before storing or covering it.

ECA26320

NOTICE

- Do not apply wax to rubber or unpainted plastic parts.
- Do not use abrasive polishing compounds as they will wear away the paint.
- Apply sprays and wax sparingly. Wipe off excess afterwards.

EWA20660

A WARNING

Contaminants left on the brakes or tires can cause loss of control.

- Make sure there is no lubricant or wax on the brakes or tires.
- If necessary, wash the tires with warm water and a mild detergent.
- If necessary, clean the brake discs and pads with brake cleaner or acetone.
- Before riding at higher speeds, test the vehicle's braking performance and cornering behavior.

Storage

Always store the vehicle in a cool, dry place. If necessary, protect it against dust with a porous cover. Be sure the engine and the exhaust system are cool before covering the vehicle. If the vehicle often sits for weeks at a time between uses, the use of a quality fuel stabilizer is recommended after each fill-up.

ECA21170

FAL 183/172

NOTICE

- Storing the vehicle in a poorly ventilated room or covering it with a tarp, while it is still wet, will allow water and humidity to seep in and cause rust.
- To prevent corrosion, avoid damp cellars, stables (because of the presence of ammonia) and areas where strong chemicals are stored.

Long term storage

Before storing the vehicle long term (60 days or more):

Motorcycle care and storage

- Make all necessary repairs and perform any outstanding maintenance.
- 2. Follow all instructions in the Care section of this chapter.
- Fill up the fuel tank, adding fuel stabilizer according to product instructions. Run the engine for 5 minutes to distribute treated fuel through the fuel system.
- For vehicles equipped with a fuel cock: Turn the fuel cock lever to the off position.
- 5. For vehicles with a carburetor: To prevent fuel deposits from building up, drain the fuel in the carburetor float chamber into a clean container. Retighten the drain bolt and pour the fuel back into the fuel tank.
- Use a quality engine fogging oil according to product instructions to protect internal engine components from corrosion. If engine fogging oil is not available, perform the following steps for each cylinder:
 - a. Remove the spark plug cap and spark plug.

- b. Pour a teaspoonful of engine oil into the spark plug bore.
- c. Install the spark plug cap onto the spark plug, and then place the spark plug on the cylinder head so that the electrodes are grounded. (This will limit sparking during the next step.)
- d. Turn the engine over several times with the starter. (This will coat the cylinder wall with oil.) WARNING! To prevent damage or injury from sparking, make sure to ground the spark plug electrodes while turning the engine over.
- Remove the spark plug cap from the spark plug, and then install the spark plug and the spark plug cap.
- Lubricate all control cables, pivots, levers and pedals, as well as the sidestand and centerstand (if equipped).
- Check and correct the tire air pressure, and then lift the vehicle so that all wheels are off the ground. Otherwise, turn the

wheels a little once a month in order to prevent the tires from becoming degraded in one spot.

- 9. Cover the muffler outlet with a plastic bag to prevent moisture from entering it.
- 10. Remove the battery and fully charge it, or attach a maintenance charger to keep the battery optimally charged. *NOTICE:* Confirm that the battery and its charger are compatible. Do not charge a VRLA battery with a conventional charger. [CARSING]
- TIP
 - If the battery will be removed, charge it once a month and store it in a temperate location between 0-30 °C (32-90 °F).
 - See page 7-29 for more information on charging and storing the battery.

Engine oil:

Recommended brand:

SAE viscosity grades: 10W-40 Recommended engine oil grade: API service SG type or higher, JASO standard MA Engine oil quantity: Oil change: 0.90 L (0.95 US at. 0.79 Imp.at) With oil filter removal: 1.00 L (1.06 US gt, 0.88 Imp.gt) Coolant quantity: Coolant reservoir (up to the maximum level mark): 0.15 L (0.16 US at. 0.14 Imp.at) Radiator (including all routes): 0.62 L (0.66 US gt, 0.55 Imp.gt) Fuel: Recommended fuel:

Unleaded gasoline only Octane number (RON): 90 Fuel tank capacity: 4.6 L (1.2 US gal, 1.0 Imp.gal) Fuel reserve amount: 0.8 L (0.22 US gal, 0.19 Imp.gal)

Fuel injection:

Throttle body: ID mark: BDK1 Drivetrain: Gear ratio: 1st: 2.833 (34/12) 2nd 1.875 (30/16) 3rd 1.353 (23/17) 4th: 1.045 (23/22) Front tire: Type: Tubeless Size: 70/90-17M/C 38P Manufacturer/model: VEE RUBBER/V421F Rear tire: Type: Tubeless Size: 80/90-17M/C 50P Manufacturer/model: VEE RUBBER/V421R Loading: Maximum load: 150 ka (331 lb) (Total weight of rider, passenger,

cargo and accessories)

Specifications

Front brake:

Type: Hydraulic single disc brake Rear brake: Type: Hydraulic single disc brake Front suspension: Type: Telescopic fork Rear suspension: Type: . Swingarm Electrical system: System voltage: 12 V Batterv: Model: PTZ55 Voltage, capacity: 12 V, 3.5 Ah Bulb wattage: Headlight: LED Brake/tail light: LED Front turn signal light: 16.0 W Rear turn signal light: 10.0 W Auxiliary light: LED License plate light: 5.0 W

Consumer information

Identification numbers

Record the vehicle identification number and the engine serial number in the spaces provided below for assistance when ordering spare parts from a Yamaha dealer or for reference in case the vehicle is stolen.

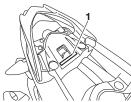

VEHICLE IDENTIFICATION NUMBER:

ENGINE SERIAL NUMBER:

Vehicle identification number

EAUV0540

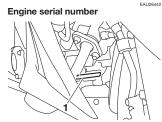

1. Vehicle identification number

The vehicle identification number is stamped into the frame under the seat. (See page 4-12.)

TIP_

EAU26366

The vehicle identification number is used to identify your vehicle and may be used to register it with the licensing authority in your area.

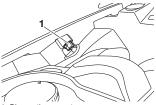

1. Engine serial number

The engine serial number is stamped into the crankcase.

Consumer information

FAI (60010

Diagnostic connector

1. Diagnostic connector

The diagnostic connector is located as shown.

Vehicle data recording

This model's ECU stores certain vehicle data to assist in the diagnosis of malfunctions and for research, statistical analysis and development purposes.

EAU85400

Although the sensors and recorded data will vary by model, the main data points are:

- Vehicle status and engine performance data
- Fuel-injection and emission-related data

This data will be uploaded only when a special Yamaha diagnostic tool is attached to the vehicle, such as when maintenance checks or service procedures are performed.

Yamaha will not disclose this data to a third party except in the following cases. In addition, Yamaha may provide vehicle data to a contractor in order to outsource services related to the handling of vehicle data. Even in this case, Yamaha will require the contractor to properly handle the vehicle data we provided and Yamaha will appropriately manage the data.

- With the consent of the vehicle owner
- Where obligated by law
- For use by Yamaha in litigation
- When the data is not related to an individual vehicle nor owner
